

CONTROLLING YOUR BUILDING'S INDOOR AIR QUALITY (IAQ) HAS NEVER BEEN SO EASY

Tremco Roofing and Building Maintenance provides the full range of building envelope continuity services you need to improve your building's health, energy and comfort. From diagnostics to repair and remediation, our team of experts can tell you if your indoor air quality is at risk of being compromised and perform the work to safeguard it from the consequences

of unwanted air infiltration. Your building envelope is your first line of defense against weather, insects, pollutants and other environmental factors. Whether it's roofs, windows, doors, the HVAC system or other building components, we can properly assess your building envelope and help you maintain or achieve a healthier, high performance facility.

WE SUPPORT OUR CUSTOMERS' GOAL OF SUPERIOR IAQ AND HEALTHY BUILDING

OUR FOUR KEY CORE CAPABILITIES TO ENSURE EXCELLENT IAQ INCLUDE

ENVIRONMENTAL PROJECT MANAGEMENT

- Indoor Environmental Testing
- Laboratory* Analysis
- Building and HVAC
- Engineered Solutions

ENVIRONMENTAL DIAGNOSTICS LABORATORY*

- Microbiological Identification and Quantification
- Bacteriology and Mycology (Mold) Analysis
- CDC Elite Program Legionella Testing

BUILDING SCIENCES

- Indoor Environmental Evaluations
- Building Envelope Testing
- Air Barrier Audits
- HVAC Hygiene and Performance Assessments

BUILDING REMEDIATION SCIENCES

- Hygienic HVAC and Duct Cleaning
- Hygienic HVAC Restoration
- Building and Room Decontamination
- Air Barrier Solutions

FIVE LEVELS OF CLEANING, NEXT LEVEL PROTECTION

WE OFFER FIVE LEVELS OF CLEANING PROTECTION, ALL BUILDING UPON THE PREVIOUS LEVEL.

LEVEL I

Tactical electrostatic spraying that fully covers high-touch surfaces and HVAC grills.

LEVEL II

Decontamination of the indoor environment and HVAC system (including ductwork) with containment; sanitizing the Air Handling Unit (AHU) and coils.

LEVEL III

Heightened decontamination of the occupied space, HVAC system and ductwork with containment, including environmental topical cleaning consisting of HEPA vacuuming and then spraying and/or wet wiping surfaces with an EPA-registered sanitizer. Topical cleaning **excludes** toilets, showers, interior of cabinets and desk drawers, dishes, canned foods, refrigerators, towels, linens, curtains, computers, electronic equipment, any kind of stock (e.g. office supplies, merchandise, books, folders, etc.) or wall decorations.

LEVEL IV

More inclusive decontamination of the occupied space and HVAC system, as well as deeper cleaning of ductwork, VAV terminal boxes and reheat coils. Level IV also **includes** a more thorough topical cleaning that covers computers, electronic equipment, any kind of stock (e.g. office supplies, merchandise, books, folders, etc.), wall decorations (e.g. picture frames, posters, artwork, etc). The books and sensitive items will be cleaned via laminar flow chambers.

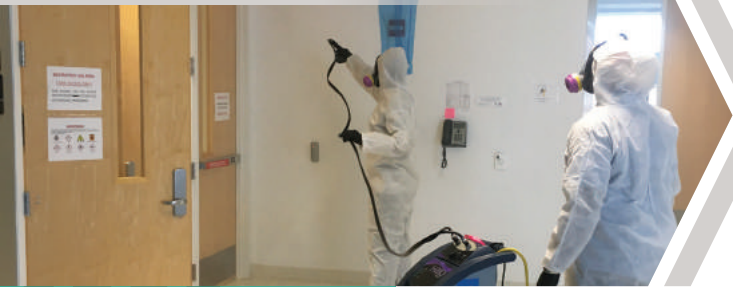

LEVEL V

Our highest level, most inclusive deep building decontamination process. In addition to everything in Levels I-IV, we will disinfect cabinet interiors, desk drawers, toilets, showers, curtains, linens, towel and kitchens with included stock and appliances.

OUR SERVICES

DECONTAMINATION

We employ a variety of methods, equipment and EPA-registered Disinfectants for Emerging Pathogens (DEP) to thoroughly decontaminate and cleanse your building, including interior/occupied spaces, air conveyance ductwork and HVAC equipment.

CLEANING

Our comprehensive, hygienic cleaning service improves your building's occupant health and achieves optimal HVAC system performance. Our four-step process allows us to contain, access, clean and monitor contaminated areas and track improvement to your building.

HVAC HYGIENIC CLEANING

HVAC coil cleaning is an innovative way to restore not only the evaporator coils, but the entire interior of an air handling unit (AHU) to near factory specification for performance and cleanliness. A comprehensive indoor air quality and energy efficiency forward solution, it is the only GreenClean Institute certified process in North America.

AIR BARRIER AUDITS AND SOLUTIONS

Gaps, cracks and holes can occur all throughout the building, leading to higher operating expenses and uncomfortable occupants. The solution is an air barrier audit to identify where leaks occur, and an air barrier system to control those leaks, eliminating air leakage, improving energy efficiency and comfort, and reducing costs.

WORKING TOGETHER, WE CAN HELP MINIMIZE THE IMPACT OF CORONAVIRUS ON YOUR FACILITIES, IMPROVING HEALTH AND SAFETY, AND PROVIDING PEACE OF MIND TO BUILDING OCCUPANTS. LET'S GET STARTED TODAY.
