Personal Philosophy

For over two decades in the roofing industry, my focus has always been on helping my clients keep their roofs and buildings dry for the least amount of money.

I achieve this through sound, thorough evaluations, recommendations and multi-year action plans to help extend the life of their roofing assets while providing a solid return on investment. My clients receive solutions that save money on repairs by focusing on preventive maintenance programs and roof restoration, which in return prevents needless, expensive tear-off and replacement projects.

When a replacement is the only option available, I provide clients with multiple roof system options and budgets; together, we choose the system which is best for them. I then provide detailed, accurate specifications for competitive bidding projects through a network of local, certified contractors, and follow the projects through to completion.

Expert Qualifications

- Almost 25 years of roofing experience
- Successfully managed hundreds of roofing projects throughout the tristate area for hospitals, schools, power plants and large manufacturing facilities
- Established and managed preventive maintenance programs for facilities with hundreds of roof levels through WTI (Weatherproofing Technologies, Inc.), a subsidiary of Tremco Incorporated
- Provided restoration and small roof repair services through WTI
- Over 1,000 hours of formal commercial roofing training
- OSHA 10 Hour certification
