

Nevada Union High School Roofing a hard-to-access area

Nevada City, California

Cold-process roofing system perfect solution for tricky project

Roofing is never easy, but sometimes reaching the “trouble spots” can make it even more complicated. Situations like this call for a unique solution, from a company such as Tremco, which has roofing systems to meet every need.

In the case of Nevada Union High School, the roof systems had failed and were in difficult-to-access areas. After thoroughly examining the roofs to ascertain their condition, Tremco sales representative Don Metzger specified Tremco’s POWERply® Standard FR in cold-process adhesive over two composite ply sheets, also in cold-process adhesive.

D7 Roofing tore the existing roof systems off, down to their wood or metal decks. They ensured that the decks were sound, then installed new insulation board and finally the new POWERply roof system.

This kind of project meshes perfectly with Tremco Roofing’s product and installation expertise. The cold-process adhesive was able to be pumped to the hard-to-access roof areas; traditional hot asphalt was not an option, since it could not be pumped from the equipment staging area. Low-odor cold-process roofing also minimizes the disruption to building occupancy. The POWERply system is extremely durable and completely weatherproofs the roof areas, providing a very long-term solution. It will also withstand foot traffic from maintenance personnel and provides better protection against vandalism. During the installation process, D7 Roofing took steps to make sure roof areas the team traveled over were not damaged.

A Tremco 15 Year QA Plus Warranty will help protect the new roof for years to come.
