

Non-Penetrating Fall Protection Systems That Take Rooftop Safety To New Heights

It's always true that an organization's greatest obligation to its people is to provide a safe working environment. But that commitment takes on even more importance when a job's responsibilities include the kind of potential risk you can find on your own roof.

At Tremco Roofing and Building Maintenance™, safety is without question our highest priority; we work diligently with building owners and managers as well as contractors to make roofs safe at all times.

Now we can help you take your rooftop safety to new heights through our relationship with Kee Safety, Inc. Kee Safety is a leading global supplier of strong, long-lasting, and aesthetically pleasing non-penetrating fall protection system solutions for roof perimeters, hatches and skylights, and our exclusive provider of these systems. Just like Tremco, Kee Safety has been in business for over 70 years; they are experts in helping keep people safe when they are on the roof.

Helping Meet OSHA Requirements

OSHA's enforcement of its fall protection statutes for commercial, industrial, institutional and public facilities is tougher than ever. Employers are bound by the 29CFR 1910 Occupational Safety & Health Standards to protect people from falls while accessing exterior levels of their facility, traversing across roof areas where there are openings, hazards or exposed edges, and while working on or maintaining rooftop equipment located adjacent to the roof edge. Paying careful attention to mitigating the risk of falls in these areas is vital, and Kee Safety systems provide a convenient, cost-effective solution.

Working closely with us, Kee Safety's team of regional sales engineers can provide custom fall protection systems that meet all applicable OSHA regulations for these and many other possible problem areas.

Solutions For Fall Protection

Depending on your facility's needs, we are proud to offer these non-penetrating fall protection solutions from Kee Safety. Made of a combination of galvanized steel and recycled PVC, these solutions are both extremely durable and weather-resistant.

Inspection services, certified installation, and extended warranties for Kee Safety systems are also available through Kee Safety's regional sales engineers. Inspection and certification help document compliance with the OSHA statutes. Rooftop CAD drawings are also available as an additional service to provide evidence of certification.

The Kee Guard Perimeter Railing System

A modular, free-standing edge railing system that offers protection around the roof's entire perimeter or adjacent to specific hazards. Suitable for a wide range of roof types, including standing seam and metal profile roofs.

- Independently tested and exceeds all North American safety requirements
- Corrosion resistant
- Supplied in pre-fabricated modules
- Tailored to suit each specific roof and/or application
- Requires no drilling, anchoring, or penetrating the roof membrane
- Safe, reliable and versatile

Weightanka Deadweight Anchor System

A mobile, non-penetrating system for use on roofs with up to a five degree slope. It provides anchor points for individual fall restraint and can also be used in a safety line configuration, providing continuous fall restraint for one or more individuals.

- Designed for use where permanent fall protection systems or permanent anchor devices are not appropriate
- Provides fall arrest for one worker and restraint for up to two workers
- Assembles quickly
- Can be used on a variety of roof surfaces in wet or dry conditions

The Kee Hatch

This safety railing system, including a spring-loaded safety gate, enables safe passage through roof hatches and helps protect the roof opening when the hatch is open.

- Allows roof access hatches to be used safely
- Exceeds minimum strength requirements for railings
- Integrates with existing openings and ladderways
- Rails serve as grab bars for easy roof access

The Kee Dome Screen

A free-standing guard rail system that fits new and existing curb-mounted skylights.

- Standard components allow rapid assembly
- PVC feet eliminate damage to the roof membrane
- Complies with relevant rooftop safety regulations
- Corrosion resistant

Kee Safety Skylight Screen

Made of galvanized or stainless steel, these screens can be secured over existing skylights to provide a simple and cost-effective solution to eliminate the risk of falls through skylights.

- Will suit a variety of skylight styles and sizes
- Ensures OSHA compliance
- Custom sizes available
- Assembles quickly
- Clamps to skylight frame

Don't Leave Rooftop Safety To Chance

Having proper and thorough fall protection systems installed at all the appropriate locations on your roof is critical. Your Tremco Roofing sales representative and Kee Safety regional sales engineer can inspect your roof and recommend turnkey solutions that will make your facility safer. We can even install it for you, quickly and with minimal disruption to your operations, using the highly trained field technicians of WTI's General Services division (WTI is a subsidiary of Tremco Incorporated.). Once the safety products are delivered, your facility's rooftop protection can be OSHA compliant in just a few hours to a few days.

To learn more about the many benefits of Kee Safety's OSHA-compliant fall protection systems, contact your local Tremco Roofing representative today. When it comes to safety, it's never too soon to call.
