

SYSTEM PROFILE

VR MOD

EXTENSIVE PRE-VEGETATED HYBRID MODULAR SYSTEM

SYSTEM OVERVIEW

VR MOD creates an instant green roof, while employing the same high performance qualities as our "built-in-place" systems.

Each unit is designed to encapsulate growing media against erosion into the drainage areas, allow for uninterrupted nutrient, root and water exchange between units, optimally hold and release storm water, and allow for seamless integration of

irrigation systems. VR MOD units positively lock together for superior wind uplift resistance and precise integration. Modules can be locked together interchangeably in both vertical and horizontal orientations.

Contained within the VR MOD unit are all the components which make up a well designed green roof system.

HIGH PERFORMANCE. MODULAR. PRE-VEGETATED.

INSTANT GREEN ROOF.

STANDARD FEATURES & OPTIONS

- Perforated side walls for soil-to-soil contact throughout the entire depth of the growing media
- Integrated water retention and drainage panel with the highest water retention capacity in the industry
- Positive-locking sidewalls for a secure module-to-module fit, regardless of module orientation
- Standard growing media depths of 4"
- Built-in filtration layer separates growing media from drainage layer
- Standard modules are pre-vegetated with sedum or shortgrass blends.
 Custom vegetation palettes available.

SYSTEM DETAILS

VR MOD

EXTENSIVE PRE-VEGETATED HYBRID MODULAR SYSTEM

SYSTEM COMPONENTS

- A ROOT BARRIER
- B MODULE
 WITH INTEGRATED RETENTION AND DRAINAGE PANEL
 AND DRAINAGE MAT WITH FILTER FABRIC OVERLAY
- C VR MOD SEDUM
 WITH ENGINEERED GROWING MEDIA

VEGETATION OPTIONS: SEDUM BLENDS

D VR MOD MEADOW
WITH ENGINEERED GROWING MEDIA

VEGETATION OPTIONS: SHORTGRASS MEADOW BLENDS WILDFLOWER MEADOW BLENDS PERENNIALS

- **E** EDGING RESTRAINT
- F VEGETATION-FREE ZONE
