Selecting a Contractor

Throughout the United States and Canada, Tremco works with a select group of contractors who are highly trained and experienced in installing all products. Your Tremco representative can provide you with names of contractors in your area, taking the guesswork out of selecting a quality contractor.

Long Term Performance

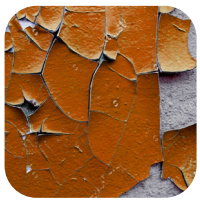

Tremco's restoration systems offer a variety of warranties to ensure the performance of your wall restoration coating system. For all material and labor warranted coating projects, job site inspections are provided to ensure that your system will provide you with years of quality service life

Tremco's Solargard® Hy-Build is a unique fibrated acrylic coating designed to restore your aging walls. Applied at 24 to 32 wet mils, more than three times as thick as regular paint, it offers the waterproofing protection you desire in one coat. In addition, the fibers in the formula offer elasticity to allow for normal building movement while bridging hairline cracks. Developed in 1965, Solargard Hy-Build has a proven track record for performance, which is why we offer a 10-year warranty. Tremco, an ISO 9001: 2015 certified company, provides the strictest quality controls to ensure product consistency and performance.

Tremco offers no-obligation wall inspections to provide you with the most beneficial solution to your particular wall restoration need.

Your wall inspection will cover two main areas — the condition of the walls and the issues spotlighted here. Special attention is given to areas such as the sealants around window sills, frames, trim and fascia.

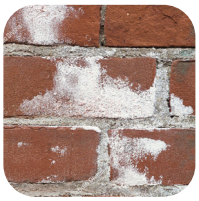

FLAKING OR PEELING PAINT

MILDEW OR FUNGUS

Tremco Restoration Systems Support Sustainability

Restoring roofs has been our mission for almost 100 years. This enables our customers worldwide to extend the lifecycle of their buildings, meet their sustainability goals, and help lower energy usage.

Tremco's roofing restoration systems are the smart choice because:

- They prolong the service life of structures for years
- Coatings are cost-effective over a second roofing layer, complying with building codes and postponing replacement for years
- There's no tear off, which eliminates landfill issues and fees and does not disrupt building occupants
- Reflectivity reduces energy consumption, the strain on HVAC systems, and a building's carbon footprint
- The urban heat island index (UHI) is lowered, benefiting everyone
